## PAPAL HONORS CONFERRED

(By Associated Press.)  
AMSTERDAM, Netherlands, May 31.—The mayor of Malines, Belgium, M. Ch. Dessain, who was recently condemned to a year's imprisonment for printing the Lenten letter of Cardinal Mercier, has been nominated by the pope a commander in the Order of St. Gregory.

## BANQUET

The public is cordially invited to attend the banquet (scene) at the Butler theater, Friday night, June 2. This is a real show, the graduating class of T. H. S. presenting "The Schoolmistress." Adv. M31.

## NO DANGER

The fire department will make a record run to the Butler theater Friday night. Don't be alarmed, but hurry down there in time for the fun. There will be snappy work going on. No film show, but "The Schoolmistress," presented by the class of 1916, Tonopah high school, Butler theater, June 2. Adv. M31.

## FAREWELL SMOKER FOR ALEX. A. DEWAR

## ELKS GATHER AT THE CLUB-ROOMS AND HOLD AN INFORMAL JOLLIFICATION

Last evening the Elks in goodly numbers assembled at the club rooms for the purpose of saying good bye to Alex. A. Dewar, grand exalted ruler of Tonopah lodge. A programme of interesting events filled the time to the great satisfaction of all and at the conclusion, Mr. Dewar was called to the front where he was presented with an Elks button. The presentation was made by J. H. Evans and the response was a feeling acknowledgment of the many favors received by the retiring officer during his fourteen years residence in Tonopah.

## ARTIFICIAL HANDS WITH MOVING DIGITS

## TRIUMPH OF INGENUITY FOR THE USE OF DISABLED MECHANICS

(By Associated Press.)  
MUNICH, May 31.—One of the many remarkable artificial hands invented during the course of the war is one just perfected by a mechanic named Will, who claims to have solved the problem of creating fingers which can be moved independently of one another and which will grasp an object as does the human hand.

The fingers of this artificial hand are made of slender pieces of steel, three to a finger, connected, and attached by tiny hinges to the metal constituting the palm. By a system of fine wires running to the elbow or the shoulder the fingers can, it is claimed, be crooked to any desired degree so as to supply the power to grasp. A twist of the arm releases the grasp of the fingers on the objects they hold.

Will's invention was made possible, it is declared, by the German Museum of Munich, one of the world's famous technical institutions. Will conceived the idea of the hand and laid it before the museum authorities, who then placed at his disposal the necessary means and assistance to perfect it. Now that it is completed the museum has given the details to the larger scientific magazines of Germany, and offers to equip free of cost anywhere shops or laboratories for manufacturing the hand on a larger scale. The faith of the museum authorities in the invention is considered by many persons as proof of its practicability.

## TUNGSTEN MINE OWNERS TO FIGHT HIGH-GRADERS

(By Associated Press.)  
BOULDER, Colo., May 31.—The large companies operating in the tungsten field have decided to organize to protect the camps from an apparently organized band of high-graders who are said to be responsible for the disappearance of from \$50,000 to \$100,000 worth of high-grade ore monthly.

P. M. Cunningham, Opt. Dr.

EYES TESTED—GLASSES FITTED

No. 218 State Bank Building

## CAPITALISTS COME TO CAMP

(Continued from Page 1)

West End is going after the ore in the litigation winze as though confident of an opinion by the supreme court in its favor, but at the same time Jim Butler is doing development work and extracting ore as though of similar mind.

Tonopah Mining company of Nevada has always had something up its sleeve, exclusive of its outside interests. Now it is in the Sandgrass, where the Murray vein has entered in width and value, both eminently satisfactory.

West Tonopah has concluded the installation of its heavy equipment and is ready to run laterals.

Cash Boy is awaiting the deepening of the Victor shaft, so that its water level may be lowered.

Gypsy Queen is sending its shaft down with three shifts. It started from the 1350 with the 1500 in perspective and that point is rapidly neared. The water is being held with ease.

Montana has not yet determined upon resuming work in mine and mill on company account, but the tributers are proving up new veins.

Having reached the 1500 point in the Tonopah Bonanza, Manager Maggee has decided that it would be better to run down to the 1700 or perhaps to the 1900 foot point before sending out laterals. He has the water conquered in the Great Western, where stringers of commercial grade were encountered, just before the water fissure was cut.

Monarch Pittsburg is looking better than it has for a long time.

The After All Mines company has been incorporated to take over the Umatilla holding of 35 acres and a similar surface of the Montana. It will be developed on the 1540 level by means of a crosscut from the Victor.

Rescue Eula has ore in six openings and is constantly developing and producing. Superintendent Sherwin is still in charge of this property. His successor will be named at the annual meeting of the shareholders.

The new equipment of the Tonopah Extension Mining company's mill is working as comfortably as an old shoe and the tonnage has been increased from 1800 tons a week to 300 tons daily.

Ore extraction and development work are in progress on three levels of the North Star. The management plans to soon install a diamond drill to prospect the formation at greater depth. One interesting feature of the North Star ore is that it carries the highest proportionate gold content of any ore in the district.

The MacNamara is now being developed at two new points of attack.

All in all, the district bids fair to largely augment its production this year, considerably exceeding its production of \$13,300,000 during the year 1915. The tonnage will be larger and the difference in the price of silver will swell the grand total. Development in the tributary districts continues to be very encouraging. The strike made by Hanson & Grimes at

## SIGMA ALPHA FRAT TO PLAY ALL STARS

## BENEFIT GAME TO DEFRAY EXPENSE INCURRED FOR THE BUNKERVILLES

There is a rumor afloat that a basketball game which in spectacular play will surpass anything ever held here before will be played some time in the near future. Several of the University of Nevada team living in the Sigma Alpha frat house on Bryan avenue have challenged any team in Tonopah or southern Nevada for a post-season game. A team composed of men from Stanford combined with some of the local lads have accepted the challenge and training will begin immediately. The Sigma's will practice at the gymnasium and the other team surnamed the All Stars will hold out on spare nights at the Airdome, where a new court will be marked off. Both teams are endeavoring to get up a side bet of fifty dollars and should this be done the game will certainly materialize.

The local quintet are in debt at the present time owing to the throw-down received by them from the Bunkerville team in the spring. This team agreed to meet Tonopah on the local court and then after all arrangements had been made and the locals had gone to considerable expense they refused to play. All profit accruing from the coming game should it be played will be used in defraying the expense thus incurred.

McKay City is opening larger and new orebodies of tungsten yielding a high per cent and from every indication, the camp is going to become one of the great producers of the world. H. M. Clifford, George Quigley and H. E. Peterson came in last evening and report there is much development and

## HIGH GRADE TUNGSTEN OPENED UP AT M'KAY

## TAKING OUT ORE TO MAKE THE FIRST SHIPMENT FROM NEW CAMP

McKay City is opening larger and new orebodies of tungsten yielding a high per cent and from every indication, the camp is going to become one of the great producers of the world. H. M. Clifford, George Quigley and H. E. Peterson came in last evening and report there is much development and

Gold Mountain promises to add to the tonnage of the neighborhood. Arrangements are being consummated for a merger in the Gold Mountain district. Out in the Crow Springs district the Payroll is about to enter the production list, while some large deals are pending at McKay City. Spanish Springs and Belmont are outputting tungsten and the latter camp is also sending in silver concentrates. Manhattan is undergoing a revival, with the White Caps crosscutting steadily in advance of production. Big Four and Big Pine ready with their tonnage. Mustang producing high grade and other properties sending greater or less quantities of ore to mill. The cinnabar prospects in the Mina district are more than promising and Round Mountain is outputting large quantities of gold from mill and placer.

## ANTIQUITY OF GAS BOMBS ADMITTED

## FIRST USED BY THE SPANISH IN LATTER PART OF SEVENTEENTH CENTURY

(By Associated Press.)  
THE HAGUE, Netherlands, May 31. The poison gas bomb employed in trench warfare today in Europe appears to have a history dating back several centuries.

Attention has just been drawn here to a discovery made during the carrying out of repairs to the naval defenses of the port of Flushing, near the southern frontier of Holland, in 1857. Some curious stone jars were found in a cleft in the outer wall of the fortress, on the east side of the naval harbor. In form they resembled gun shells, and were found to be filled with asphyxiating materials. A chemical investigation showed that the contents included finely-ground Spanish pepper and pepper seeds, gunpowder, fine pitch and antimony, these ingredients give rise, in a state of combustion, to an asphyxiating gas.

Moreover, on investigating twenty-five of such jars, though unfilled, were actually found still stored in an old lumber room of the Dutch arsenal at Veere. They must then have been centuries old. The jars agree in form with those described in works on pyrotechnics of 1614 and 1651.

When the enemy in those days stormed the ramparts of a fortress he was pelted with these unpleasant missiles, which were used also in close quarter fighting at sea. According to a work dated 1679, they were replaced towards the end of the 17th century by pots, containing such ingredients at pitch, resin, saltpeter, brimstone, colophony, coal, horse-hoof filings and poisons of various kinds.

## VALUABLE ADVICE IN A FREE LECTURE

## EMINENT PRACTITIONER FROM RENO WILL BE IN TONOPAH FRIDAY

Dr. Alex. Brown, a specialist in diseases of the eye, ear, nose and throat will be here Friday for the purpose of delivering two free lectures on the eyes, ears and teeth. The first lecture for the benefit of the public school pupils will be delivered in the high school gymnasium at 2:30 p. m. Friday, June 2. In the evening at the same place the lecture will be repeated for the benefit of miners and others workers and their families. The course of instruction is very valuable in first aid work and is given in accordance with the suggestion of the state bureau of public health which is trying to educate the people to the necessity for paying more attention to simple rules of health which is trying to educate the people to the necessity for paying more attention to simple rules of health governing treatment of the chief faculties of the human system.
